

PureLine DO PH

UV DEOZONATION FOR FOOD AND BEVERAGE

Our **PureLine DO PH UV** systems are aimed specifically at providing ozone removal and treatment for product and process waters used in the food and beverage industry. When installed in a distribution loop the PureLine DO PH will remove residual ozone dosed into the water to maintain microbiological integrity. The UV system can be remotely controlled to turn off to allow residual ozone to treat the purified water loop during a SIP and then be turned on again to remove the ozone before the loop is put back into service. Each system comes with a UV monitor to measure the lamp output making it easy to monitor and log performance.
